

What's New at Argonne

July
2010

Argonne in the News

USGS's Lithium Find Means Little for Mythical Shortfall
[New York Times »](#)

Crude Habit: No other nation is so thoroughly hooked on petroleum as the U.S.
[National Journal Magazine »](#)

More electric cars means finding new standards to measure fuel efficiency.
[Washington Post »](#)

More Stories

Raining oil in Louisiana? Not likely.

An Argonne chemist explains why – despite the YouTube videos – it's not likely to rain oil in the Gulf. [Christian Science Monitor »](#)

Mileage markers

Argonne researchers help set new standards to test plug-in hybrid electric cars. [More »](#)

World's most intense X-ray laser takes first shots

Peeling apart atoms one by one at SLAC. [Wired Magazine »](#)

Visible-light catalysis achieved

Gold nanoparticles create visible-light catalysis in nanowires. [More »](#)

Energy explorers

A tribal internship program helps students from American Indian and Alaskan Native tribes develop windmills and study alternative energy. [More »](#)

The dirty truth about plug-in hybrids

An interactive graphic about the sources of electricity for hybrid cars from *Scientific American*. [See graphic »](#)

Over two billion served

Argonne's supercomputer celebrates two billion processor-hours run in the service of science. [More »](#)

Crystal-clear proteins

To really understand a protein, crystallizing it is just the first step. [Nature Magazine »](#)

Why no men on Mars?

A theory for why no organic compounds have been found in Martian soil. [More »](#)

Three new Distinguished Fellows

The lab bestowed its highest scientific honor on three scientists last month. [More »](#)
